Professors take science to Sri Lanka

For more about the project, see story on page C2.

Scientists in America’s Fresh Science Center look to buy a bus for traveling Science Education.That’s how they can educate kids in Sri Lanka. They also took the Science Foundation of Sri Lanka, and Kambala, to help fund the project.

Aranjala, a researcher at the University of Lausanne, will also be involved in workshops on how to build new science labs in the schools. She and Kambala took the opportunity to visit the country and talk about the importance of science education.

The goal is to improve the quality of education and to increase the interest of students in science. They believe that by building new science labs and providing resources, they can help students to improve their knowledge and skills.

Aranjala said, "The idea is to get kids interested in science. By providing them with new facilities and resources, we hope to encourage them to pursue science as a career."

She and Kambala hope to continue their work in the future and to expand the program to other schools in Sri Lanka.
